

Cut+

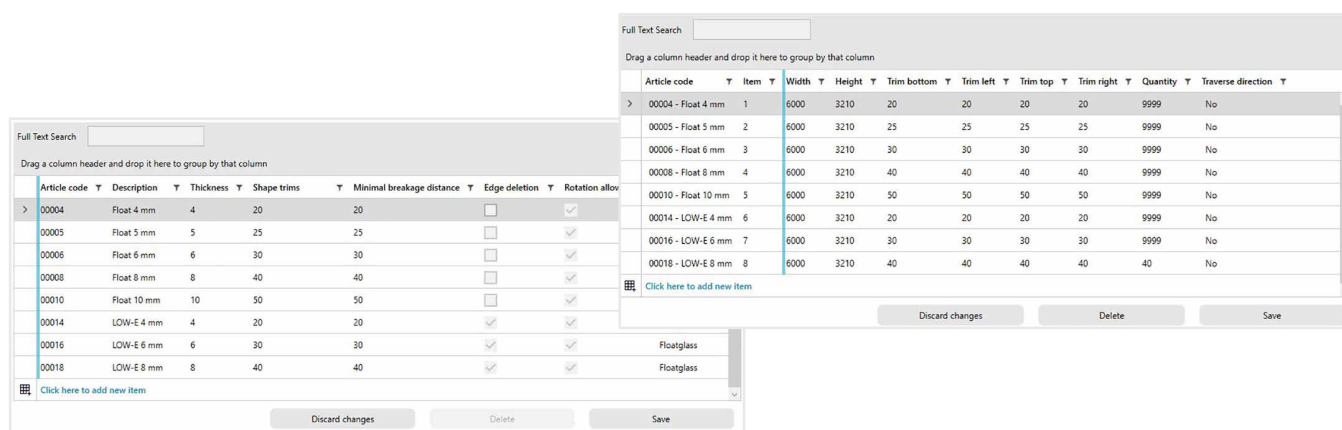

The Smart Software
for Cutting

Small Tool, High Performance

Use the full potential of your cutting system with Cut+, the smart, intuitive software tool for the technical entry of customer orders, cutting plan creation, and intelligent waste optimisation. With a wide range of functions, interfaces, and pre-programmed applications, Cut+ completely adapts to your needs and simplifies your processes. The software's unique flexibility also impresses during its installation: the application can either be used directly at the cutting table or on an office computer.

Saved Once, Always Accessible

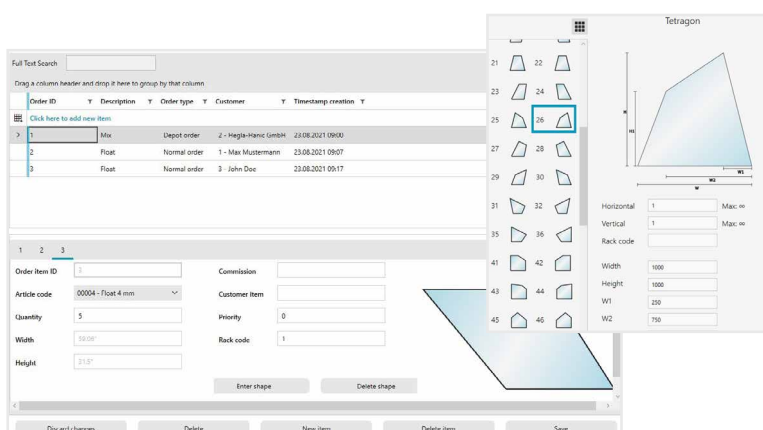

The intuitive item system makes life easier. Once one of the products in your portfolio has been entered, you can access the item and associated stored properties at any time. The customer database for label or laser printing is also practical. Automatically or at the press of a button, you can initiate printing jobs with a barcode, customer name and delivery date, for example. The warehouse management function provides additional transparency in the form of an overview of which glass is available.

Intuitively Enter Orders

It's your choice: Import your orders from Excel as csv files or enter them using a touch-sensitive input mask. The live editor shows you the selected geometry for a visual plausibility check. A clever shape catalogue simplifies your input of complex shapes. With the order tool, you can manage your orders in a user-friendly manner and enter or adjust these properties:

- Rectangles and shapes
- Shape catalogue/customer shape catalogue
- DXF import for pane geometries
- Grinding addition
- Decoating
- Laser marking/labels
- CSV order import

Editing Cutting Plans, Optimising Waste

From the order to the cutting plan: With the Cut+ cutting plan editor, you can create your cutting plan automatically and with system-controlled offcut optimisation, create an individual plan according to your needs or import an existing version. Use the drag & drop function to drag panes into the cutting plan, delete glass, change positions or manually adjust properties. You can use a network connection or flash drive to export to the cutting table. The editor also has a number of additional functions. For example:

- Shape catalogue for special free forms
- Break-out addition for shapers
- Manual grinding addition for edge processing
- Decoating contours for offset IG units
- Laser marking for HEGLA boradent and Synrad CO₂
- Piece placement via drag & drop
- DXF import
- Cutting plan, list and label print-outs
- ReMaster connection/remnant sheet handling
- Open communication via OPC UA

System Requirements

Cut+ is the independent software with open interfaces for almost all cutting tables from a variety of manufacturers. Cut+ is available in a smart or pro version. Optional add-ons can be booked at any time, and an upgrade to the all-inclusive version is also possible. You will find an overview of the functions on our website.

Would you like to try out Cut+? We offer Cut+ trial, a 30-day test version. To order it, simply contact info@hegla-hanic.de.

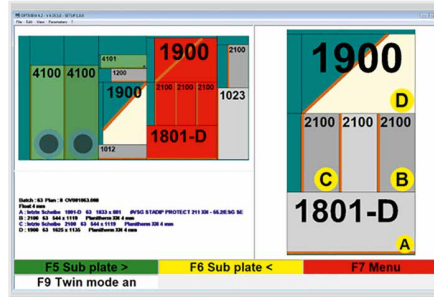

- Windows 10 operating system
- Min. 4 GB RAM, 8 GB preferred
- SQL database (if not already on hand)
- Approx. 10 GB memory (without an SQL database)

Expand Your Options

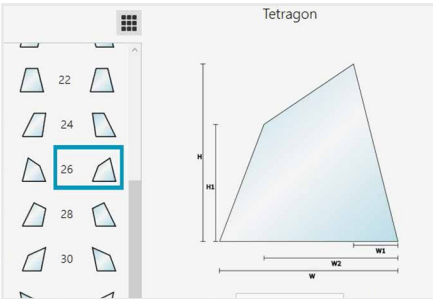

Add-on modules and functions for a comprehensive overview of your production:

HEGLA-HANIC Cockpit

Break-out view

Free shape editor

Label editor

Laser marking

Shop-Floor Assistant app

Supported Languages/Units of Measure
